Mission C244C	on 7 November 1964. The
flown over North Korea and Mainland China	
mission was planned to update order-of-bat	ttle information on North
Korea, the Port Arthur area, and the Shan	tung Peninsula, which had not
been sufficiently covered by recent satel	lite or U-2 photography. The
aircraft departed	for a
total flight time of six hours and forty-	six minutes. During the thre
hours and twenty-four minutes over denied	
targets were overflown. Forecast weather	at Go-No-Go time was Cat II
(scattered clouds) with patchy Cat III (b	roken clouds). The pilot
reported the weather over the target area	s as better than forecast and
early indications show the mission route	was flown as planned.
